Aim: Practical based on Data Visualization with Plotly

IDE:

Installation

```
pip install plotly pandas
```

Creating a Sample Dataset

```
import pandas as pd
```

```
import plotly.express as px
```

Creating a Sample Dataset

```
# Sample data
```

```
data = {
```

```
    'Product': ['A', 'B', 'C', 'D', 'E'],
```

```
    'Sales': [100, 200, 150, 300, 250],
```

```
    'Profit': [30, 70, 50, 120, 90]
```

```
}
```

```
df = pd.DataFrame(data)
```

Creating Basic Visualizations

Bar Chart

```
# Bar chart for Sales
```

A bar chart is great for comparing quantities across categories.

```
fig = px.bar(df, x='Product', y='Sales', title='Sales by Product')
```

```
fig.show()
```

Output:

| | | |
|--|--|-----------------------------------|

| Experiment No: 24 | Date: | Enrollment No: 92510133028 |

Line Chart

A line chart can help visualize trends over time or categories.

Line chart for Profit

```
fig = px.line(df, x='Product', y='Profit', title='Profit by Product')
```

```
fig.show()
```

Output:

| | | |
|--|--|-----------------------------------|
|  Marwadi University Marwadi Chandarana Group  | Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology | |
| Subject: Programming With Python (01CT1309) | Aim: Practical based on Data Visualization with Plotly | |
| Experiment No: 24 | Date: | Enrollment No: 92510133028 |

Scatter Plot

A scatter plot is useful for examining the relationship between two numerical variables.

Scatter plot for Sales vs. Profit

```
fig = px.scatter(df, x='Sales', y='Profit', color='Product', title='Sales vs. Profit')
```

```
fig.show()
```

Output:

| | | |
|--|--|-----------------------------------|
|  Marwadi University Marwadi Chandarana Group  | Marwadi University Faculty of Engineering & Technology Department of Information and Communication Technology | |
| Subject: Programming With Python (01CT1309) | Aim: Practical based on Data Visualization with Plotly | |
| Experiment No: 24 | Date: | Enrollment No: 92510133028 |

Customizing Visualizations

Plotly allows for extensive customization. Let's enhance our bar chart with more features.

Enhanced Bar chart

```
fig = px.bar(df, x='Product', y='Sales',
             title='Sales by Product',
             color='Profit', # Color by Profit
             text='Sales') # Show sales value on bars

# Customize layout
fig.update_layout(xaxis_title='Product',
                  yaxis_title='Sales',
                  legend_title='Profit',
                  template='plotly_dark') # Change template
```

| Subject: Programming With Python (01CT1309) | Aim: Practical based on Data Visualization with Plotly | |
| Experiment No: 24 | Date: | Enrollment No: 92510133028 |

fig.show()

Output:

Exporting Visualizations

Plotly figures as static images or HTML files.

Save the figure as an HTML file

```
fig.write_html('sales_by_product.html')
```

| | | | |
|--|------------------|------------------|----------|
|  sales_by_product | 09-11-2024 11:02 | HTML Source File | 4,461 KB |
|--|------------------|------------------|----------|

Save the figure as a PNG file (you may need to install kaleido)

```
fig.write_image('sales_by_product.png')
```
